Information Technology Services
New York University
New York, NY 10003

I am very interested in working for Information Technology Services. I have had five years of experience in a technology lab environment, which has given me a thorough knowledge of hardware and software installation, maintaining an inventory, and troubleshooting. I would enjoy the opportunity to put my technical knowledge to use at NYU.

I currently maintain five labs at Mississippi State University, which range in different OS platforms and equipment specifications. This has given me the experience to prevent or diagnose technology failures that are often prevalent in a lab environment. The labs at MSU are open to all students in the Department of Art, so there is a constant need to update or patch computers so they have the most current hardware and software available. I received my Master's degree in Electronic Visualization, which exposed me to many different mediums which I have used to advance my graphic design portfolio. I have used industry standard equipment to make commercials, promotional videos, and animations. This would allow me to tackle any technical problem, in a variety of mediums, that may arise at NYU, and allow faculty to continue their project or research without delay. I am in constant search for new technology that can speed up the workflow in academia, which could give the faculty a new freedom to explore the different methods of working. I am open to learning any new medium to better understand how it works, and how it can be applied to the specific program to facilitate better results. I am a lecturer at MSU, so I am aware of the importance of educating users, and know how to teach the use of technological equipment to others.

Please take a moment to look at my resume. You can contact me by phone to set up an interview. Thank you for your consideration, and I look forward to hearing from you soon.
